1. The table in the attachment shows the number of German and Russian industrial enterprises in the Russian zone in 1946 and 1947, the number of employees, and the value of industrial production. The decline in the number of Russian enterprises from 1946 to 1947 is caused by the return to the Germans of a number of enterprises which proved either unproductive or unprofitable. Source states that 85 - 90% of the production in German industrial enterprises was channeled on to the SMA.
